

# Dornier Medilas D FlexiPulse

<b>COMPANY</b>	Dornier MedTech America, Inc.
<b>PHONE</b>	(800) 367-6437
<b>WEB</b>	www.dornier.com
<b>KEY FEATURES</b> <ul style="list-style-type: none"> <li>• Treats both spider and varicose veins</li> <li>• Small, tabletop design</li> <li>• Lightweight and portable</li> <li>• Unique LPS protects the fiber and vein</li> <li>• Color touch screen</li> </ul>	

Dornier MedTech America, Inc. (Kennesaw, GA) introduces the new Dornier Medilas D FlexiPulse, which combines proven diode technology with the absorption characteristics of the 940 wavelength to create a treatment solution for both spider and varicose veins.

According to the company, the laser is equipped with an intuitive, high-resolution, touch-sensitive color display that allows quick adjustments to all treatment parameters. Customized treatment parameters can be stored for one-touch recall and simple set up. The small footprint, lightweight design, and integrated handle make transporting the laser easy.

The 120-watt Medilas D FlexiPulse can be operated in either a pulsed or continuous treatment mode. The system can be used for transcutaneous procedures using one of the treatment handpieces or for endoluminal and surgical procedures by attaching one of the thin, flexible fibers available. The laser comes equipped with the proprietary Lightguide Protection System (LPS), which automatically disables the laser if the sensor detects light emissions due to excessive heat at the tip. This feature enhances safety by preventing damage to both the vein and the fiber, the company says.

# SureSubtraction Software Package

<b>COMPANY</b>	Toshiba America Medical Systems, Inc.
<b>PHONE</b>	(714) 730-5000
<b>WEB</b>	www.medical.toshiba.com
<b>KEY FEATURES</b> <ul style="list-style-type: none"> <li>• Automates bone subtraction process</li> <li>• Reduces CT examination time</li> <li>• Available for Toshiba's 8-, 16-, 32-, and 64-slice CT systems</li> </ul>	

Toshiba America Medical Systems, Inc. (Tustin, CA) introduces SureSubtraction, a new advanced software package for Toshiba's Aquilion CT line that will reduce CT examination time for patients who exhibit symptoms of neurologic disorders by automating and streamlining bone subtraction.

Currently, subtracting bone from neurovascular CT angiograms is cumbersome because physicians must scan the brain twice, once with contrast and once without, and then manually subtract bone structures from the image to better visualize the vessels and tissue. According to the company, Toshiba's SureSubtraction offers a complete neurovascular CT-DSA solution that is fast, accurate, easy to use, and improves patient care. SureSubtraction, exclusive to Toshiba, is an option for Toshiba's 8-, 16-, 32- and 64-slice CT systems. SureSubtraction will be clinically evaluated at a number of Toshiba's luminary sites before it is made available to customers, the company says.

# Cordis Aviator Plus PTA Dilatation Catheter

<b>COMPANY</b>	Cordis Endovascular Division of Cordis Corporation
<b>PHONE</b>	(800) 327-7714
<b>WEB</b>	<a href="http://www.jnjgateway.com">www.jnjgateway.com</a>
<b>KEY FEATURES</b>	
<ul style="list-style-type: none"> <li>• Rapid inflation and deflation times</li> <li>• .043-inch crossing profile (4-mm and 4.5-mm sizes)</li> <li>• Sleek, manicured tip (&lt;.90-mm outer diameter)</li> <li>• 4-F sheath fit (7-mm sizes are 5 F)</li> <li>• Carotid angioplasty indicated</li> <li>• Duralyn balloon technology</li> </ul>	

The Cordis Endovascular Division of Cordis Corporation (Warren, NJ) announced the worldwide launch of the Cordis Aviator Plus PTA Dilatation Catheter for use in angioplasty procedures for patients with carotid and/or renal artery blockages. Aviator Plus combines a unique high-pressure expansion and low-profile .014-inch rapid exchange or single-operator system that facilitates procedural speed and efficiency by enabling fast inflation and deflation times. According to the company, fast inflation and deflation during carotid or renal intervention procedures helps to limit the period of distal ischemia, and the catheter's low profile may help reduce the risk of plaque disruption and embolization when crossing the lesion.

As with other Cordis Endovascular PTA catheters, Cordis' Duralyn Balloon Material makes the Aviator Plus strong, which allows for precise and consistent inflation diameters, the company says. ■
