KEY FEATURES

- Devices move freely through fenestrations
- Adhesive pull tab
- Water resistant
- Writable surface

The Guide-Klip medical device retaining tool is a sterile, water-resistant clip designed to reduce accidental device contamination by holding and organizing guidewires, catheters, intravenous tubing, and cables in the patient care setting. The Guide-Klip design anchors the device or cable to the drape or table but allows for free movement through the fenestration. The adhesive pull tab is designed for use in diagnostic and interventional procedures, operating rooms, ICU/CCU, and the emergency room.

The Guide-Klip medical device retaining tool is available for sale and distribution in the United States. ■
