Our 2010 Buyer's Guide

Welcome to the 2010 edition of the *Endovascular Today* Buyer's Guide—our annual comprehensive listing of the manufacturers, sizes, specifications, and features of the devices that are currently available in the United States interventional market.

In the rapidly advancing field of endovascular intervention, new device options are introduced frequently, and additional sizes and configurations are added to existing lines to meet the needs of interventional specialists. *Endovascular Today's* editors and representatives have been working with our colleagues in industry for several months to maintain the accuracy of our previous Buyer's Guides, updating this year's edition by adding all of the new entries to the market that have been launched throughout the year. Several new charts have also been created to accommodate entirely new classes of devices.

Each device chart specifies the product names, companies, and the sizing information relevant to that device class in a parallel, concise, and uniform fashion. The fold-out tabs provide a quick reference to the location of the larger classes of devices, while the smaller classes can be found easily either via the index or at the tops of the pages.

After the device charts, you will find a complete listing of all the manufacturers that have devices included the Buyer's Guide. Their mailing addresses, phone numbers, and Web sites are all included for your reference.

Finally, as in past years, the Buyer's Guide will be posted in its entirety on our Web site, www.evtoday.com. The device charts are available in downloadable PDFs, free of charge.

We hope you continue to find this endeavor to be a valuable resource in your practice, and as always, we welcome any feedback you may have.

Best wishes for a happy, healthy, and prosperous new year.
