

Unanswered Questions

In your
practice today,
what is the
greatest
unanswered
question
regarding MIGS?

"With so many MIGS devices available with various mechanisms of action, we need to have a better understanding of patient selection. Right now, it is heavily based on personal experience. However, with the development of diagnostics for the outflow system, we can have better accuracy with our choice of technique for improvement of patient outcomes."

— CONSTANCE O. OKEKE, MD, MSCE

"How can we best customize the choice of MIGS procedures and preoperative/postoperative care to maximize success for an individual patient?"

— DEVESH VARMA, MD

"For some surgeons, predicting the reliability of the canalicular outflow might be the preeminent unanswered question about MIGS; however, I believe it is equally important that we better study the complementary effect afforded by MIGS to get 'trab-like' levels of IOP lowering."

— STEVEN R. SARKISIAN JR., MD
