Innovations in MIGS: A Look at the Pipeline

On *Innovation Journal Club*, I. Paul Singh, MD, and Leonard Seibold, MD, sit down to discuss two innovations in the MIGS pipeline: Streamline (New World Medical) and MIMS (Sanoculis). Central to their conversation is the concept of how MIGS in general is redefining the definition of a successful outcome.

Remote Monitoring of Glaucoma

On a recent episode of *GT: The Podcast*, Susan Liang, MD, outlines existing and developing technologies designed to enable high-quality virtual glaucoma care. Dr. Liang discusses portable optic nerve imaging, AI algorithms, and more solutions.

Postop Penguins

Mandai Wildlife Reserve shared that six senior penguins recently underwent successful cataract surgery with custom IOL implantation.

March 13 at 10:00 PM · 🌐

After being diagnosed with cataracts last year, six of our senior penguins underwent successful surgery to help them regain their sight. 🐧👁️ We are so glad to see they have since made a full recovery!

Not only does this procedure help to enhance their overall well-being and quality of life, but it would also aid in the penguins' transition to their new home in [#BirdParadise](#) when they move.

Special thanks to [The Eye Specialist for Animals](#) for lending their expertise and making the surgeries a success! 🙌
